

# Zinnanti Smoke-Evac Derm Tip

14-3100

**Zinnanti Surgical Smoke-Evac Derm electrode, tubing kit & sterile sleeve are designed for use with the ConMed Hyfrecator® for Dermatology MOHS procedure.**

## DIRECTIONS FOR USE / GENERAL OPERATION

Zinnanti Smoke Evac derm electrode are provided sterile. Zinnanti Smoke Evac Hyfrecator tubing kit (14-4010HA) is provided non-sterile single use and does not require sterilization before use.

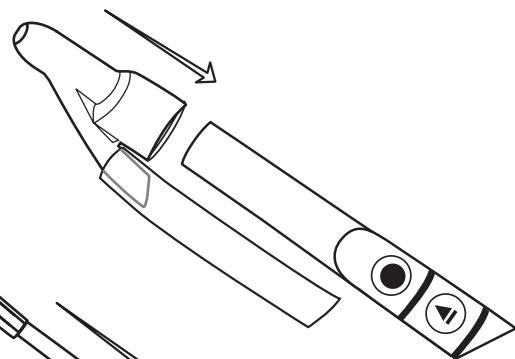

- 1) Place the soft plastic Y connector onto the distal end of the hand piece as shown (figure 1).
- 2) Place the sterile electrode into the hand piece through the open end of the tubing kit connector end first (figure 2).
- 3) Sterile sleeve is then placed over the electrode (figure 3).
- 4) Use tape on application ring to attach sleeve to sterile tip (figure 4).
- 5) Put applicator ring over tube set & cord to provide sterile barrier.

## INDICATIONS FOR USE

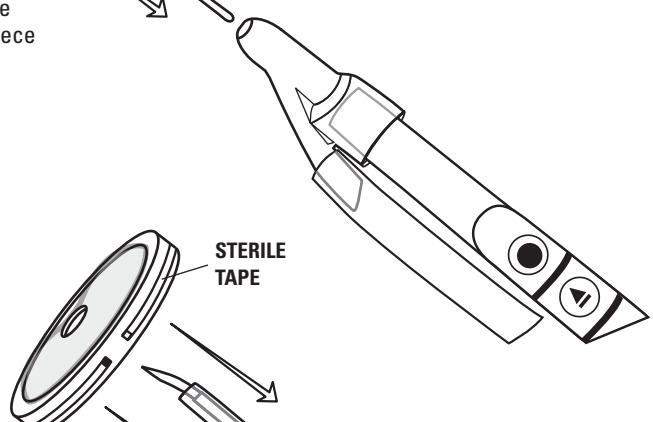

Consult Hyfrecator® instructions for use. Blades and tubing kit are designed for collection of smoke during Electrocautery of external procedures.
